

# NEW GENERATION BIN LIFTER

The new generation Bin Lifter has used **safety, functionality and reliability** as its base platform. With the combination of these three design components, this machine offers what no other can !

## **Greater Stability:**

With a 20% reduction in overall height the bin lifter still maintains a standard tipping height of 1830mm.

## **Positive Up, Down Operation:**

Along with “power up”, the “power down” option has been added to enhance operation.

## **Smoother Operation:**

The addition of two gas springs has improved the smooth operation when emptying bins.

### **Robust Structure:**

The compact design has resulted in an effective and robust structure.

### **Greater Flexibility:**

As well as the 20% reduction in height, the length has been reduced by 33%, adding to the lifters range of service.

### **Safety Benefits:**

As this machine is a vertical lift, it eliminates the risk of injury currently encountered from forward operating machinery.

### **Energy Efficient:**

Cost effective and power efficient motor means 50 % reduction in power consumption and double the power efficiency.

### **Cost Effectiveness:**

Cages can be added at minimal cost.  
Reduced freight costs.  
Cheaper setup costs.
